

Umesh Deepak Waghmare

Full Stack .NET Developer | Angular | Azure | REST APIs

umeshdwaghmare@gmail.com | +91 9503432089

Pune, India | LinkedIn: [linkedin.com/in/umesh-waghmare](https://www.linkedin.com/in/umesh-waghmare)

Experience: 6+ Years

Profile Summary

- 6+ years of experience in designing and developing enterprise-grade web applications as a Full Stack Developer using .NET Core, C#, Angular, TypeScript, and SQL Server
- Strong expertise in building scalable, high-performance applications using ASP.NET Core Web API, MVC architecture, and microservices-based design
- Extensive experience with Entity Framework (Database-First & Code-First), including query optimization, indexing strategies, and handling large-scale data processing
- Proficient in developing modern, responsive UI applications using Angular (AngularJS to Angular 16) with strong understanding of:
 - Component-based architecture
 - Reactive forms and state management
 - HTTP client integration and routing
 - Performance optimization techniques
- Strong knowledge of JavaScript/TypeScript, including asynchronous programming (async/await, promises), event handling, and DOM manipulation
- Hands-on experience in implementing secure authentication and authorization using:
 - Azure Active Directory (Entra ID)
 - JWT token-based authentication
 - Role-based access control (RBAC)
- Experience with Azure cloud services, including:
 - Azure Blob Storage for scalable document management
 - Microsoft Graph API for user identity and access integration
- Developed and integrated AI-enabled applications, including:
 - AI-driven chat systems
 - Document-based AI response generation
 - Real-time communication using WebSockets
- Strong understanding and practical application of software design principles and patterns, including:
 - SOLID principles
 - Repository pattern and Dependency Injection
 - MVC, MVVM architecture patterns
- Proven experience in end-to-end software development lifecycle (SDLC) across Dev, UAT, and Production environments, including deployment and post-production support
- Demonstrated ability to work as an independent contributor, managing multiple concurrent projects (2–3 projects in parallel) with effective prioritization
- Experience collaborating with cross-functional teams including Frontend, Backend, QA, DevOps, and AI/ML teams in Agile environments
- Strong experience in performance tuning, debugging, and resolving production issues in high-availability systems
- Hands-on experience with Agile/Scrum methodologies, including sprint planning, backlog grooming, and retrospectives using JIRA and Azure Boards
- Proficient in version control systems (Git) and maintaining code quality through best practices
- Strong analytical, problem-solving, and troubleshooting skills with focus on scalability, reliability, and maintainability

Technical Summary

Programming Languages

C#, JavaScript (ES6+), TypeScript, HTML5, CSS3, JSON

Frontend Engineering

Angular (AngularJS, Angular 7, 9, 10, 16)

Component-Based Architecture, Reactive Forms, Routing

State Management & API Integration (HTTP Client)

jQuery

Syncfusion UI Components (Data Grids, Charts, Dashboards, Reporting UI)

Backend Engineering

.NET Core, ASP.NET Core

ASP.NET Core MVC, RESTful Web API Development

Python (Microservices / AI integrations)

Entity Framework & Entity Framework Core (Code-First & Database-First)

Architecture & Design

Microservices Architecture

Layered / Clean Architecture (Controller–Service–Repository)

SOLID Principles

Design Patterns (Repository Pattern, Dependency Injection)

REST API Design & Integration

Cloud & Enterprise Integrations

Microsoft Azure

Azure Active Directory (Entra ID)

Azure Blob Storage

Microsoft Graph API

AI/ML Service Integration (API-based, document-driven processing)

Data & Persistence

SQL Server (2019) – Query Optimization, Indexing, Performance Tuning

MySQL

Dev Tools & Collaboration

Git, SmartGit

JIRA, Azure Boards

Visual Studio, Visual Studio Code

SQL Server Management Studio (SSMS)

Other Technical Competencies

WebSockets (Real-Time Communication Systems)

Performance Optimization & Debugging

High-Concurrency & Large-Scale Data Handling

Agile/Scrum Development Practices

Professional Experience

Pepper Advantage

Software Developer

Jan 2024 – Present

- Proven ability to own the end-to-end application lifecycle, including requirement analysis, system design, development, testing, and deployment across Dev, UAT, and Production environments
- Experienced as an independent contributor, delivering scalable and high-quality solutions with minimal supervision
- Demonstrated leadership in driving technical decisions, mentoring team members, and enforcing best coding practices (SOLID principles, clean architecture)

- Strong experience in handling multiple concurrent projects (2–3 in parallel) with effective prioritization and timely delivery
- Hands-on experience in production deployments, release management, and post-production support
- Worked extensively in Agile/Scrum environments, actively participating in sprint planning, grooming, and retrospectives
- Collaborated with cross-functional teams including Frontend, Backend, QA, DevOps, and AI/ML teams to deliver end-to-end solutions
- Strong expertise in performance optimization, scalability, and high-volume enterprise applications
- Experienced in environment management (Development, UAT, Production) and resolving environment-specific issues
- Proactive in debugging critical issues, identifying bottlenecks, and ensuring system reliability and uptime

Project Name : LoanGuard

Role: Full Stack / .NET Developer

Tech Stack: .NET Core, ASP.NET Core MVC, C#, Angular, AngularJS, TypeScript, Entity Framework (Database-First), SQL Server, REST APIs, python (AI/ML),
Azure AD, Azure Blob Storage, Microsoft Graph API

Responsibilities:

- Worked on existing enterprise application using Entity Framework Database-First approach
- Developed and enhanced loan processing modules and workflows
- Integrated AI/ML microservices (Node.js-based) for:
 - Document verification
 - Risk analysis
 - Automated decision-making
- Implemented document upload and processing system using Azure Blob Storage
- Built and consumed APIs for:
 - Loan application processing
 - Status tracking
 - Decision responses
- Integrated Azure AD authentication and Microsoft Graph API for secure access
- Optimized SQL queries, LINQ operations, and API performance
- Handled large datasets and high concurrent users in production systems
- Provided production support and resolved critical incidents

Project Name : LoanGuard Lens (Lease / Onboarding System)

Role : Full Stack / .NET Developer

Tech Stack : Angular 16, TypeScript, HTML5, CSS3,
ASP.NET Core, Web API, C#,
Entity Framework Core (Code-First), SQL Server,
Microservices Architecture, REST APIs,
Azure AD, Azure Blob Storage, Microsoft Graph API

Responsibilities:

- Developed application from scratch using Entity Framework Core Code-First approach
- Designed database schema, relationships, and migration strategies
- Built multi-tenant system supporting multiple clients with isolated configurations
- Designed and implemented microservices architecture for scalable processing
- Developed dynamic rule engine for client-specific workflows and decision logic
- Integrated LoanGuard core APIs for:
 - Loan application creation
 - Status tracking
 - Decision responses

Frontend (Angular)

- Developed responsive UI using Angular 16 (component-based architecture)
- Implemented:

- Reactive forms
 - HTTP client for API integration
 - Role-based dynamic UI rendering
- Built interactive dashboards with charts/graphs for reporting and analytics

Advanced Features

- Implemented Azure AD authentication and secure multi-tenant access control
- Integrated Azure Blob Storage for document management
- Used Microsoft Graph API for user data and authentication flows
- Developed automated reporting system based on rule engine outputs
- Optimized system for high-volume data processing and performance

Project Name : GenChat – AI Assistant Platform

Role : Full Stack / .NET Developer

Tech Stack : Angular, TypeScript, HTML5, CSS3

ASP.NET Core, Web API, C#

Azure AD (Entra ID), Microsoft Graph API

Azure Blob Storage, WebSockets

Azure Boards, AI/ML Services

Description :

GenChat is an AI-powered assistant platform designed for enterprise users, enabling real-time communication, document-based AI responses, and analytics-driven insights in a multi-client environment.

Responsibilities:

- Developed AI assistant platform using ASP.NET Core and Angular, enabling intelligent and role-based user interactions
- Implemented Azure AD authentication and Microsoft Graph API integration for secure login, user management, and role-based access control
- Designed multi-tenant architecture, supporting multiple clients with configurable workflows and access control
- Built Ops Chat (real-time communication system using WebSockets)
 - Enabled AI-based responses derived from document policies stored in Azure Blob Storage
 - Integrated AI/ML services to process documents and generate contextual responses
 - Ensured low-latency, scalable messaging system
- Implemented document management using Azure Blob Storage, enabling secure storage and retrieval for AI processing
- Developed customer survey analysis module, including:
 - Data comparison across responses
 - Graph-based visualization for insights
 - Analytical dashboards for decision-making
- Created Incident Dashboard integrated with Azure Boards, allowing:
 - Tracking of tickets, epics, and features
 - Sprint-level analysis and reporting
 - Resource and task management
- Worked across end-to-end system design, API development, frontend implementation, and integrations
- Ensured system scalability, performance, and maintainability using clean architecture, SOLID principles, and best practices

Anthology

Software Developer

Oct 2022 – Dec 2023

Project Name : Anthology Student International.

Role : Software Developer.

Duration : Oct -2022 to Dec2023.

Tech Stack : HTML5, CSS3, JavaScript, TypeScript, Odata, AngularJS, C#, ASP.NET CoreMVC, Entity Framework, LINQ, SQL Server 2019.

Description: It's a student management information system handling student curriculum. Currently clients have the desktop-based application developed using Visual Basics 6.0, and wanted to migrate it with a web-based application with the help of Service-Oriented Architecture (SOA).

CampusVue Management is a product for a US based And Non US Based University basically for students, faculty, and administrators as their online gateway to academics, career placement, office applications, and more. Easily integrated with Campus Vue Student, CampusVue Portal brings the campus experience online to serve applicants, students, staff, employers, and alumni anywhere in the world.

This is a portal which is built in Agile Methodology using SOA architecture & J-query. Students, staff, employers all can login and access all their details. Admin can assign the courses for a specific class, instructors can also be assigned to a section, and all the personal details with the details can be maintained in it.

Responsibilities:

- Understanding of all existing Applications.
- Handling the coding of various UI screens
- Merge Code of Campus Student
- Feature Enhancement
- Implementing New End to End Features .
- Resolving Customer incidents in Live Project
- Performance Improvement With Large Data

Extentia IT Pvt. Ltd.

Software Professional

Aug 2021 – Sep 2022

Project Name : LetsGo2

Role : Software Professional

Duration : Aug-2021 to Aug-2022

Technology Specification : HTML5, CSS3, JavaScript, Angular7, C#, ASP.NET CoreMVC, Web API, Entity Framework, LINQ, SQL Server

Description : LetsGo2 is Flight Booking and Hotel Booking Website with Special Packages providing Company for European Countries tourist and User-friendly tourist Guide Website.

Responsibilities :

- Developed a powerful Single Page Application and dynamic responsive Web Application with Entity Framework.
- Extensively Worked on Restful Web Services.
- Implemented Callback and Arrow Function and maintained UI using JSX.
- Implemented Lifecycle methods and Async Await.
- UI Development with Technologies Like HTML, CSS, Angular And jQuery.
- Resolving errors and make sure it should be very minimal in source code while development
- Working experience with version control system GIT and JIRA in an Agile Scrum environment
- Involved in SDLC Requirements gathering, Analysis, Design, Development and Testing of application using Agile methodology
- Involved in client discussions for sprint grooming, show & tell, retrospective meetings extensively worked with clients for any issues.

Project Name : MahindraAuto

Role : Software Professional

Duration : Aug-2021 to Aug-2022

Technology Specification : HTML5, CSS3, JavaScript, Angular7, C#, ASP.NET CoreMVC, Web API, Entity Framework ,LINQ , SQLServer

Description : Mahindra Auto Website is User Functional Website Where End User Can Explore all the information of Mahindra Products and they Can Book the Test Drive for specific Slot and Book the product of Mahindra.

Responsibilities:

- Developed a powerful Single Page Application and dynamic responsive Web Application with Entity Framework.
- Implemented Callback and Arrow Function and maintained UI using JSX.
- Implemented Lifecycle methods and Async Await.
- I worked with NPM commands and using Package. Json for managing dependencies and dev dependencies of applications
- Resolving errors and make sure it should be very minimal in source code while development
- Working experience with version control system GIT and JIRA in an Agile Scrum environment
- Involved in SDLC Requirements gathering, Analysis, Design, Development and Testing of application using Agile methodology
- Involved in client discussions for sprint grooming, show & tell, retrospective meetings extensively worked with client for any issues

Fincuro Solutions

Software Developer

Feb 2021 – Aug 2021

Project Name : First West RDO

Role : Software Developer

Duration : Feb-2021 to Aug-202

Technology Specification : HTML5, CSS3, JavaScript, AngularJS, C#, ASP.NET CoreMVC, SQL Server

Description : First West is an expert financial advice that has Relevant Day to day banking product and innovative technology solution, it is web-based application Developed using Entity Framework 6 Code First Approach with the help of client-server architecture, mvc5, Angular4, HTML/CSS, swagger API, jQuery,

First West is the financial product for United States citizen which verifies the identity, register for the credit Union Finance activities

Responsibilities:

- Understanding of all existing Applications.
- Handling the coding of various UI screens
- Developing API and webpages
- Developing Integration API

Ixia Solutions

Software Developer Trainee

Nov 2019 – Nov 2020

Project Name : CampusNexus

Role : Software Developer Trainee

Duration : Nov-2019 to Nov-2020

Technology Specification : HTML5, CSS3, JavaScript, AngularJS, C#, ASP.NET Core,MVC, Entity Framework, LINQ,SQLServer 2008.

Description : It's a student management information system handling student curriculum. Currently clients have the desktop-based application developed using Visual Basics 6.0, and wanted to migrate it with a web-based application with the help of Service-Oriented Architecture (SOA).

Campus Vue Management is a product for a US based University basically for students, faculty, and administrators as their online gateway to academics, career placement, office applications, and more. Easily integrated with Campus Vue Student, Campus Vue Portal brings the campus experience online to serve applicants, students, staff, employers, and alumni anywhere in the world.

This is a portal which is built in Agile Methodology using SOA architecture & J-query. Students, staff, employers all can login and access all their details. Admin can assign the courses for a specific class, instructors can also be assigned to a section, and all the personal details with the details can be maintained in it.

Responsibilities:

- Understanding of all existing Applications.
- Handling the coding of various UI screens
- Developing Unit Test using MOQ
- Developing Integration Test

Educational Summary

- Post graduate diploma in advanced computing, CDAC from AIT YCP Mumbai (2019) with 60.00%. • Bachelor of Engineering in Computer Science and Engineering from MIT, Aurangabad (2018) with 5.69 CGPA.
- HSC from Vidyadham Science Jr. College, Aurangabad (2014).
- SSC from S.B High School, Aurangabad (2011) with 61.65%.
